BBSRC Networks in Industrial Biotechnology and Bioenergy (NIBB) and our low-carbon future

- **C1 Net** (The Carbon Recycling Network)
- **E3B** (Elements of Bioremediation, Biomanufacturing & Bioenergy: Metals in Biology)
- **EBNet** (Environmental Biotechnology Network)
- **HVB** (High Value Biorenewables Network)
- **BBNet** (Biomass Biorefinery Network)
- **Algae-UK** (Exploiting the algal treasure trove)

CO$_2$ fixation by plants in agriculture and forestry, and by ocean biomass, leads to sustainable and improved consumer products. Wastes and residues from old and new industries are recycled, reducing fossil carbon, coal/oil, gas emissions.
